Posture Executive Chair

High Back with Sculpted Foams

The ergonomic backrest supports both the lower and upper back, particularly reducing stress at the top of the back and the neck area. The backrest contouring delivers additional support for the body, and minimises stress and strain on the discs and lower back joints.

Inflatable Lumbar Support

The inflatable lumbar cushion can be inflated or deflated to provide the required level of support for each sitter. This improves comfort and support and is particularly useful for sitters with pre-existing injuries. It encourages the sitter to maintain a dynamic sitting posture. It is designed to support the lower back area following the natural curves of the spine to minimise stress to the joints, discs and muscles.
