## Chiropractic Centre

### **Contoured Seat and Backrest**

The chair features a curved lumbar cushion and a height adjustable contoured backrest, making it suitable for users of various heights. These ergonomic features help relieve pressure on the lower back, support users with existing back conditions, and help prevent both lower and upper back and shoulder issues from developing.

### **Pump-Up Lumbar Support**

The adjustable pump-up lumbar support allows each user to fine-tune the level of lower back support to their exact needs. Combined with the contoured backrest, this delivers excellent comfort and helps reduce strain on the lumbar spine, spinal joints, intervertebral discs, and lower back muscles.

### **Multi-Functional Height Adjustable Armrests**

The armrests can be width and height adjusted to suit a range of tasks. They are topped with multi-directional arm pads for further personalisation. This provides effective support for the arms and shoulders, helping to reduce tension, prevent strain-related conditions such as RSI, carpal tunnel syndrome, and tennis elbow, and promote long-term upper limb health.

### **Synchro Plus Tilting Mechanism with Free Float Mode**

This advanced mechanism allows users to move freely while seated, promoting better circulation in the lower back, pelvis, and hips. It reduces stress on the lumbar spine and activates the body's natural blood-pumping system, helping to prevent deep vein thrombosis (DVT). Multiple locking positions let users adjust their posture depending on the task at hand.

### **Seat Slide**

The seat depth can be adjusted to suit users of different leg lengths, ensuring a tailored fit that supports healthy circulation in the thighs and buttocks. The waterfall front seat further reduces pressure points and helps improve blood flow to the lower limbs, again lowering the risk of DVT.

### **Height Adjustable Headrest**

The headrest can be tilted, raised or lowered for individual comfort, providing essential support to the head and neck. This helps reduce tension in the shoulders and neck, easing symptoms like headaches and migraines.

### **High-Quality Twin Castors**

Smooth-rolling twin castors make it easy to move the chair without strain. This helps users reposition themselves safely without twisting or awkward movement, supporting transitions in and out of the seat.
